CT-CombiCom

## Professional Headsets for DECT- and Smartphones

CeoTronics offers professional headsets for optimum use with smartphones and DECT-telephones. The headsets with noise cancelling microphone supports audio sockets using the CTIA-standards (Cellular Telecommunications Industry Association), such as the Alcatel 8232 DECT-Telephone, or the Apple iPhone. Therefore, they can be used even in noisy environments and be worn under protective helmets, as well as to use other protective gear.

### CT-HN Headset

The high-noise headset has dual earphones and a flexible microphone boom, and is especially suited to noisy environments, such as in industry. The sturdy earmuffs offer a high level of noise reduction and can be also worn with a protective helmet.

### CT-ClipCom BoomMike

CT-ClipCom BoomMike enables flawless communication. Depending on requirements, either a lamella shaped

earplug offering excellent wearer comfort or an individually molded ear piece from medical-grade silicone can be used. Each variant can be simply clipped on, making the communications system personnel-independent.

### CT-Neckband Headset

The neckband headset from CeoTronics is the right choice for challenging working environments, since it features an ultra-low profile design and minimal unit weight. Offering superb comfort at just 22 grams – and without sacrificing robustness – the use of special adjustable wire means it can be shaped to fit the individual wearer. The headset uses a sound-conducting tube to route loudspeaker signals directly into the ear aperture.

### CT-CombiCom

The modular CT-CombiCom, a marvel of flexible design, is a robust and lightweight headset system. It offers users

both the choice and flexibility to put together a tailor-made set of communications equipment to match operational requirements.

Products also available with different jack plugs. To find out which headset would be right for you, we will be happy to advise you. Talk to our professional field sales staff.
